 0.255g

**Combustion Analysis**

$C_x H_y O_z + O_2 \rightarrow CO_2 + H_2O$   
 0.255g                      0.561g      0.306g

① mole C →  $CO_2$

0.561g $CO_2$	1 mole $CO_2$	1 mole C
44g $CO_2$	1 mole $CO_2$	

= 0.01275 mole C

② mole H

0.306g $H_2O$	1 mole $H_2O$	2 mole H
18g $H_2O$	1 mole $H_2O$	

= 0.034 mole H

$C_x H_y O_z = C + H + O$   
 0.255g = 0.153 + 0.034 + 0.068g O

→  $\frac{0.068g}{16g} = 0.00425 \text{ mole O}$
